

Paul Scott

Over twelve years experience in information technology with five years professional experience in information security. Currently, I work at Alert Logic as service manager for the Vulnerability Assessment and Web Application Firewall product lines. Before this position I joined Alert Logic to found a security analysts that focused on a host based intrusion detection service offering for Alert Logic. I grew that team from two analysts to fifteen analysts and from ten clients to what is currently over three hundred clients. I have discovered, reported, and help resolve numerous web application vulnerabilities in open source software. My hobbies include source code analysis, web application firewall evasion, and black box web application testing.

I would like to be an OWASP Chapter Leader because it is important to me that Houstonians interested in web application security have a place to increase their knowledge and a community to share their experience with. I would like to organize OWASP meeting so I can ensure interesting and interactive OWASP events that will revive the OWASP community here in Houston.

I have read, understand and agree to the terms within the Chapter Leader Handbook.
